

Compliance Program Development

Virtual Lockout/Tagout & Confined Space Training Webinars

Executive Summary

A medical device client that develops and supplies clinical diagnostics to the pathology market requested that The Catalyst Group provide:

- *On-site Review of Training Needs*
- *Evaluation and Update of existing training package.*

- *New Training Program Development.*

Challenges

The client had 61 programs that required review and updating. We worked with the client to prioritize and identify the Top 15 high-risk programs that we could have an immediate impact on.

How We Helped

The Catalyst Group worked with our client to develop their high priority compliance programs. Our general methodology was:

On-site review of training needs - We conducted a detailed review of the HSE training needs based on regulatory requirements, written compliance programs and discussions with the plant management and HSE personnel. The results of this review were used to generate a list of safety and health trainings that were needed. On-site management and the HSE professionals were interviewed to determine the safety culture that must be portrayed through the training programs.

Evaluation/Update of existing training packages - We evaluated the existing training packages and provided the necessary updates and/or revisions as required. The focus was to provide simplified, compliant training packages.

New Training program development - We developed a PowerPoint-based training program for each compliance program for which there was currently no existing training. In addition, we developed training packages for any identified regulatory HSE training requirements.

Results

This was one of the most challenging projects that our team has completed. Over several months, we worked closely with the client to develop programs that included:

- Process Safety Management
- Machine Guarding
- Formaldehyde Awareness Training
- Electrical Safe Work Practices
- Accident Reporting & Investigation Plan
- Hexavalent Chromium
- Chemical Hygiene Plan
- Fall Protection
- Emergency Action Plan
- Forklift Classroom Training
- Ergonomics/Back Safety
- Hazard Communication/Chemical Safety

About Us

A premier global consultancy, The Catalyst Group is trusted by clients to manage their most challenging environmental, health and safety issues.

Our reputation has been built on a foundation of solid technical and scientific excellence, innovation and client service. Our independent science-first approach ensures that our strategic advice is objective and defensible. We apply integrated multi-disciplinary services and tailor each solution to our client's specific needs and challenges. This approach transforms us from a company that just delivers a service to one that is a true partner in risk minimization.
